

Short bio

Dr Aaliyah Momani is an assistant professor of nursing at Applied Science Private University, Amman, Jordan. Email: a_momani@asu.edu.jo

Bio: A current assistant professor of nursing at the Applied Science Private University in Jordan. I teach several courses for bachelor nursing students such as maternal and neonatal health nursing (theory and clinical); children and adolescent health nursing (theory and clinical); principles of scientific research; and others.

I am an expert in using qualitative methodologies, especially using grounded theory methodology. My research interests include and not limited to managing chronic conditions especially diabetes among children, adolescents and young adults; maternal health; and women's health. I use both qualitative and quantitative research methods.

I also collaborate with the Jordanian Nursing Council on several levels: first, designing and delivering workshops for fresh nursing graduates on the topic of sexual and reproductive health for adolescents. Second, I am a member of child health nursing scientific committee for the National Jordanian Nursing Licensure Exam.

My aim is to work at a world-class institution, researching and improving the lives of children, adolescents, and women.

Abstract Title: "It was an Experience Full of Responsibilities": A Qualitative Study on Adolescents' Pregnancy Experience from Jordan
